

WorldView Lockbox Processing Solution

Overview:

WorldView provides the ability to capture Bank Lockbox documentation directly into the WorldView Electronic Document Management solution, providing timely and accurate information regarding Lockbox deposits over the Web. As a result, companies can reduce paper processing and storage with more efficient Lockbox processing. WorldView associates all payments, remittances and other documents together in one single repository, creating a superior business process automation format for processing invoices and payments, electronically.

Corporations can view images of remittances, checks or other documents over the Web minutes after they have been processed. WorldView provides the unique ability to identify items that cannot be processed due to missing or incomplete information for the client to make decisions immediately, eliminating the delay of pulling the physical item and manually presenting the item for review.

Benefits:

- Improves cash flow, streamlines processes and delivers a superior customer experience
- Reduces labor-intensive data entry, copying, printing and storage of checks
- Provides instant access to all relevant data
- Enhances and expands product offerings with the ability to email or fax invoices or present invoices over the web
- Reduces data security loss costs
- Reduces physical space, by replacing paper archive with electronic archive
- Provides on-line decision transaction capability
