

WorldView WorkView Module

Overview:

WorkView is a WorldView solution that enables organizations to view and track both information and interactions surrounding a specific business process. An extension of the WorldView ECM solution, WorkView unites data and human interaction, providing a complete view of the business. The ability to capture, track and analyze status, performance and behaviors through a single interface enables organizations to swiftly act upon issues and rapidly develop methods for managing critical processes.

When deployed with the other WorldView products such as Workflow and E-Forms, WorkView delivers enhanced levels of process review by automatically routing content between collaborating participants. These modules in concert provide a mechanism to create, collaborate, log, execute and conclude business transactions in a structured, efficient environment, harnessing the strength of WorldView's document management capabilities.

WorkView has been proven to serve as a governance and compliance solution to satisfy regulatory requirements such as Sarbanes-Oxley and HIPAA, and the pre-configured Risk and Compliance Template simplifies the entire process. The WorkView module documents processes, risks and controls and offers audit functionality. In fact, any single unit around which content and/or human interaction revolves can be captured with a WorkView application.

Core Features:

- Rapid application deployment for collaborative enterprises
- Configured to mirror current business process so little-to-no end-user training is required
- Independent, user-definable interfaces for different business groups
- Relational management of correspondence used to relate like events to one another
- Point-and-click configuration
- Granular security integrated with WorldView document management system
- Search filters and view portlets for custom data views and retrieval
- Compliance and Audit capabilities
- Document routing and processing integration with WorldView Workflow module
